**Hong Kong Web Society**  
on  
**“Tamino Native XML Server”**

Mr. Tony Yip  
Software AG (Hong Kong) Ltd

<b>Date :</b>	24 May 2002 (Friday)
<b>Time :</b>	5:00 p.m. – 6:30 p.m.
<b>Venue :</b>	Rm Y6405, 6/F, Yellow Zone, Academic Building, City University of Hong Kong, Tat Chee Avenue, Kowloon

## Abstract

The benefits of XML can be summarized by one word. SPEED. Speed of course is a key reason why enterprises are moving to eBusiness in the first place. Faster reaction to customer needs, faster publishing of information to customers and supply chain partners; faster processing of orders received over the internet. And the list goes on. Speed is also an acronym used in the Keynote Address to explain the key benefits of XML. It goes: **S**toring, **P**ublishing and **E**xchanging **E**lectronic **D**ocument. This presentation will provide an in-depth description of the internals of Tamino, the Native XML Server with reference to its design specification. The X-Machine and X-Node facilities will be discussed. Examples of organizations worldwide which are using the features of Tamino to enhance their Electronic Business initiatives will be shown. Finally a demonstration of the Tamino product will be performed to provide a hands-on feel of the benefits your business can obtain from Tamino.

## Biography

Currently Tony is the Business and Training Consultant in Software AG Hong Kong. He has over 7 years working experience in Database and System Design & Administration and involved in many large projects. Tony is also a member of DBSIG of HKCS.
