

Hong Kong Web Society

Hong Kong Web Society and Oracle presents:
Oracle Business Components for Java

Venue: Room A0416, The Open University of Hong Kong

Date: 25/8/2000

Time: 6:00-8:00pm (Reception from 6:00-6:30pm)

Speaker: Mr. Vince Wan (Senior Consultant, Oracle Systems HK LTD)

Abstract

Supporting standard EJB and COBRA deployment architecture, Oracle Business Components for Java simplifies the development, delivery and customization of Java business application for the enterprise. Oracle Business Components is an application component framework providing developers a set of intelligent software building-blocks to manage all of the common facilities required to:

- Productively author and test business logic in components which automatically integrate with databases,
- Flexibly reuse business logic through multiple SQL-based views of data, supporting different application tasks,
- Efficiently access and update the views from Servlets, JavaServer Pages (JSPs), and Thin-Java Swing clients
- Easily customize application functionality in layers without requiring modification of the delivered application.

By eliminating the substantial coding and testing work related to common "application plumbing" facilities, Oracle Business Components lets application developers focus full-time on implementing business solutions. The benefits of using this framework are immediate and obvious: reduced development cost, lower project risk, and shorter time-to-market.

Speaker:

Mr. Vince Wan is a Senior Consultant from Oracle Systems HK Ltd. His area of specialty is in designing e-business solutions for enterprises to migrate into new e-business models. His achievements include using Erich Gamma's design patterns to implement reusable components on stock settlement systems and to design and implement user authentication systems on a broadband portal. Mr. Wan has over six years of design and development experience on using object-oriented technology in various industries such as telecommunications, retail, banking, and finance.
